

Combined Repo to GitLab Instructions

1. Create an empty GitLab repository (no README, .gitignore, or LICENSE).
2. `cd combined_repo`
3. Verify history: `git log --graph --oneline --all`
4. Check remotes: `git remote -v`
5. Add GitLab remote: `git remote add origin git@gitlab.company.com:team/combined-repo.git`
6. Check branch: `git branch`
7. Rename branch if needed: `git branch -M main`
8. Push: `git push -u origin main`

Future Updates

`git subtree pull --prefix=A A main`

`git subtree pull --prefix=B B main`

`git subtree pull --prefix=C C main`

`git push origin main`
